

Emanuel Campos Jasso

Backend Engineer | Node.js (NestJS) & Laravel | API Architecture | Mobile Product Development (React Native) | Cloud

Nueva Oxtotitlán, Méx. 50100 | +52 722 338 2744 | isw.ecamposj@gmail.com

Professional summary

Backend-focused Software Engineer with a product-oriented mindset and strong architectural discipline.

Experienced in designing and building scalable systems using Node.js (NestJS, Express), Laravel, React, and React Native. I work across the full development lifecycle — from domain modeling and architectural decisions to production deployment in cloud environments.

My expertise includes:

- Designing robust and maintainable REST & GraphQL APIs
- Applying clear separation of concerns (Domain / Application / Presentation)
- Making explicit architectural trade-offs
- Implementing CI/CD pipelines with GitHub Actions
- Containerized environments using Docker
- Cloud deployments (AWS, Vercel, Railway)

I have experience building early-stage products end-to-end, taking ownership of technical architecture, scope definition, and long-term structural clarity.

AWS Certified Cloud Practitioner with solid foundations in cloud architecture, security, and operational best practices.

Work experience

Founder & Product Engineer

AMOX Digital — Independent Product | Desde casa

December 2025 to Present

End-to-end design and development of an early-stage mobile product focused on reducing cognitive friction for small businesses selling via chat.

Owner of backend architecture, mobile implementation, product scope, and technical decision-making.

Product Definition • Defined strict product boundaries to prevent scope creep and complexity accumulation.

- Conducted early qualitative validation with real users.
- Explicitly documented MVP scope and out-of-scope decisions.

Architecture & System Design • Implemented layered architecture (Domain / Application / Presentation).

- Enforced separation between domain entities with invariants and input models (DTOs).
- Designed identity modeling using a logical singleton pattern.
- Differentiated persistence strategies based on data lifecycle.
- Designed backend boundaries aligned with product constraints to avoid premature complexity.
- Documented architectural decisions using ADRs.

Engineering • Built with React Native and TypeScript.

- State management decoupled from domain logic.
- Trade-off-driven development focused on structural clarity.

Full Stack Developer

King Tide | Ciudad de México, CDMX

March 2022 to August 2026

Design and development of production-grade web applications, contributing to backend architecture, system design decisions, and deployment workflows.

Backend Architecture & APIs • Designed and implemented REST and GraphQL APIs using Node.js (NestJS, Express) and Laravel.

- Modeled domain logic and data structures to ensure maintainability and scalability.
- Optimized database queries and backend performance in production environments.
- Integrated third-party services and SaaS platforms.

Frontend Systems • Built modular and maintainable interfaces using React and Next.js

- Implemented reusable components and improved rendering performance.

Infrastructure & Delivery • Implemented CI/CD pipelines using GitHub Actions.

- Managed deployments across AWS, Vercel, and Railway.
- Containerized services using Docker for consistent environments.
- Configured Cloudflare and AWS S3 for performance and storage optimization.

Collaborated in agile teams, participating in technical discussions, code reviews, and architectural decisions.

Full Stack Developer

Valparaíso Servicios Funerales | Toluca, Méx.

April 2020 to March 2022

Developed internal web systems to digitize and streamline operational processes.

- Designed and implemented backend systems using Laravel and .NET.
- Built frontend applications with React.
- Developed mobile features with React Native.
- Containerized applications using Docker.
- Managed relational databases (MySQL).

Contributed to process efficiency by replacing manual workflows with custom-built internal tools.

Education

Ingeniería en Software (Egresado)

Universidad Autónoma del Estado de México | Toluca, Méx.

August 2012 to October 2017

Skills

Laravel (Nova, Filament)

Layered Architecture (Domain / Application / Presentation)

REST & GraphQL API Design

Architectural Decision Records (ADRs)

React

Docker

AWS (Cloud Fundamentals)

Domain Modeling

React Native

Node.js (NestJS, Express)

TypeScript

Trade-off Driven Development

Separation of Concerns

Scope Definition & Complexity Control

Next.js

Languages

Inglés - Intermediate

Certifications and licenses

AWS Certification

April 2025 to April 2028

Certification that validates foundational knowledge of AWS services, cloud architecture, security, billing, and support models. It provides a solid foundation for professional development in cloud environments.

Publications

AMOX Digital — Product & Architecture Case Study Description

<https://github.com/JassoEC/amox-digital-product-notes>

February 2026

Technical documentation of an early-stage product focused on architectural clarity, scope definition, and trade-off driven development.

Includes product boundaries, layered architecture design, domain modeling decisions, and Architectural Decision Records (ADRs).

AMOX Digital — Android Application Published on Google Play

https://play.google.com/store/apps/details?id=com.ecajasso.amoxdigital&pcampaignid=web_share

February 2026

Android mobile application designed to reduce cognitive friction for small businesses selling through chat.

Built with React Native (Expo) and published on Google Play (LatAm).

Developed using layered architecture (Domain / Application / Presentation), local persistence (AsyncStorage + SQLite), and clear separation between UI and domain logic.
